Freeride trails are often wider than technical trails, containing enhanced and modified terrain, obstacles, and features such as jumps, berms, banks, bridges, drops, etc. created from dirt, wood or other materials. Freeride trails may also incorporate technical trail features and designs.

Technical trails are often relatively narrow and contain features and characteristics found naturally occurring on the area property, its slopes, trails, and terrain. Technical trails may contain roots, gravel, rocks, logs, water crossings, jumps, drops and other natural characteristics and obstacles found in the natural environment, and may also include some man-made obstacles and bridges. Technical trails may also incorporate freeride trail features and designs.
